YEALANDS
Biodiversity Plan

An intergenerational plan to increase biodiversity across our Seaview Vineyard and surrounding areas.

30 year plan

50% emission reduction by 2030

Carbon Positive by 2050

270 hectares of land planting over 1,000,000 native trees

Protecting sensitive and erosion prone land

Creating a healthy and resilient ecosystem

Improving water quality

Creating an eco-sourcing hub

Increasing biodiversity

Demonstrate leadership across the winemaking industry

Creating wine with an abundance of flavour

Comprised of 5 distinct implementation stages:

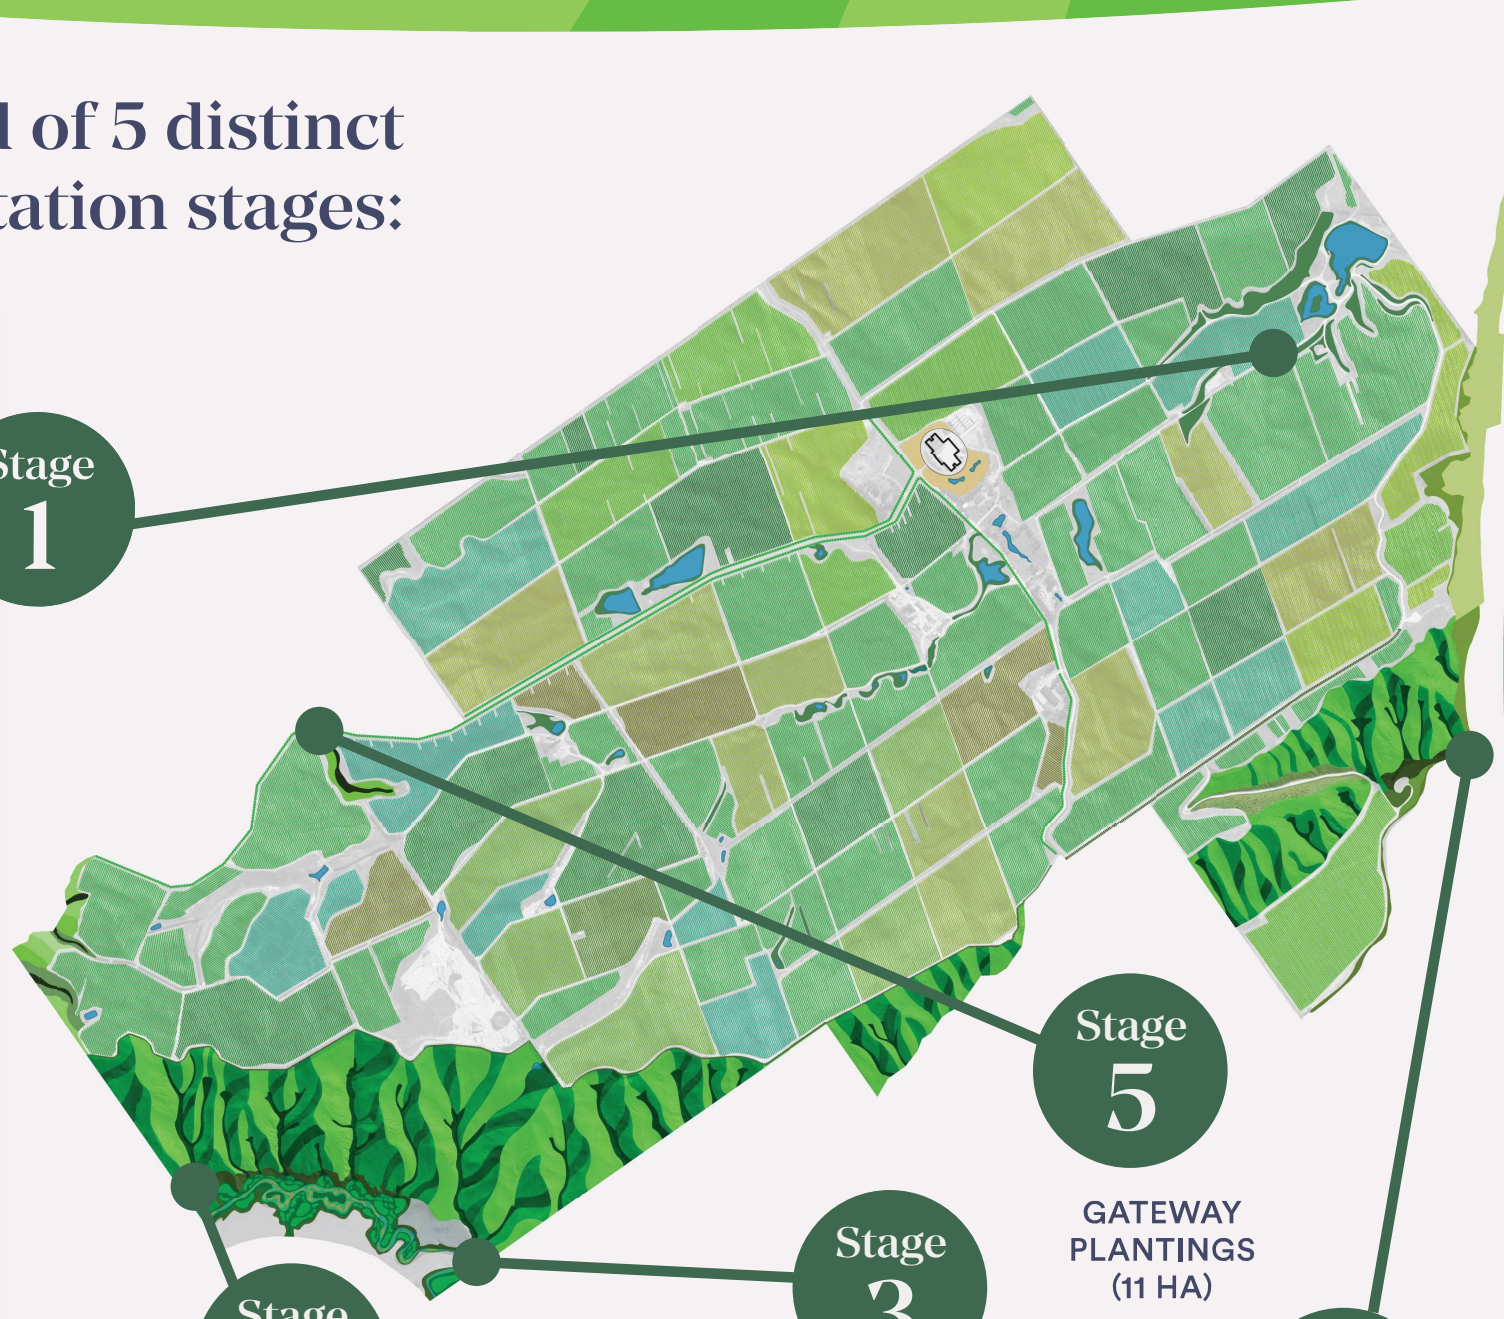

STATION CREEK (17 HA)

We are re-establishing the primary waterway that flows the length of the vineyard to its original watercourse. So far we have removed sections of the vineyard, surveyed and re-established the channel and planted 10,000 trees

Stage 1

Stage 2

HILLSIDE RESTORATION (176 HA)

Protecting steep, erosion prone land through the establishment of extensive native tree plantings

Includes protection and propagation of endangered tree species

Stage 3

WETLAND RESTORATION – HOG SWAMP (46. HA)

Wetland planting – protecting & enhancing sensitive natural area

Stage 5

GATEWAY PLANTINGS (11 HA)

Stage 4

COASTAL RESTORATION (7 HA)

Coastal planting – preserving dynamic coastal environment
